

Correction to “Electrocatalytic $Z \rightarrow E$ Isomerization of Azobenzenes”

Alexis Goulet-Hanssens,^{1b} Manuel Utecht, Dragos Mutruc, Evgenii Titov, Jutta Schwarz, Lutz Grubert, David Bléger, Peter Saalfrank,^{*} and Stefan Hecht^{*1b}

J. Am. Chem. Soc. **2017**, *139*, 335–341. DOI: [10.1021/jacs.6b10822](https://doi.org/10.1021/jacs.6b10822)

Page 339. In [Figure 6](#), the x -axis is labeled incorrectly. The unit should be seconds instead of minutes. The corrected [Figure 6](#) is displayed below.

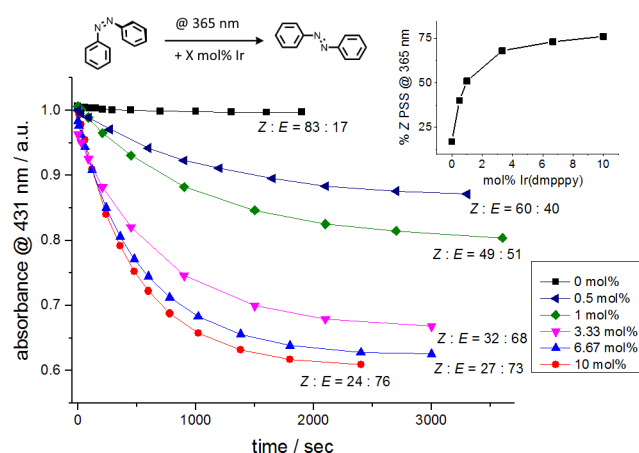

Figure 6. Catalytic reductive $Z \rightarrow E$ isomerization of parent azobenzene **1** triggered by photoinduced electron transfer from an iridium complex $(\text{Ir}(\text{dmppy})_3)$: Upon addition of catalytic amounts of $\text{Ir}(\text{dmppy})_3$ to the Z -rich PSS mixture (containing 83% of Z -1) and subsequent irradiation at 365 nm, the amount of E isomer in the PSS is substantially improved (inset, top right) while also the isomerization rate is dramatically increased.
